< Files

```
8 8/ in your text editor go to the settings.py file inside
   the new project
9 9/ add 'apps.**app name**' to INSTALLED_APPS list
10 10/ go to the main urls.py file
11 11/ import 'include' on top line
12 12/ change url patterns to (r'^$', include('apps.**app
   name**.urls'))
13 13/ add urls.py file in apps/**app name** folder
14 14/ in that file add:
15     from django.conf.urls import url
16     from . import views
17
18     urlpatterns = [
19         url(r'^$', views.index) ** or whatever routes you
   need**
20     ]
21 15/ inside **app name** folder create 'static' folder for
   css/js/images as needed
```
